

Keyboards for Santali Language

MSKLC: Santali

Latin letters with certain diacritic characters.

Download [here](#).

What some users like:

- Native Windows keyboard

What some users don't like:

- Does not work on mobiles

Needed information:

If you can, please update the content above with answers to these questions.

- Does this keyboard use "deadkeys"? (MSKLC keyboards are unable to modify already-typed characters, so must use deadkeys instead, which are less intuitive for new keyboardists.) If so, perhaps list this as a shortcoming.
