# Bloom Session 11

## Introduction

There are other more advanced features of Bloom that have not been covered in this course. Some of them could be cover in this session.  Below is a list of potential features with a brief explanation that may be covered in this session.

## List of potential features

1. **Custom Page**: Bloom allows the user to setup a custom page.  The user can define how many text frames and image frames can be on a page and their location on the page.  See video on custom page.  A good exercise is to have the participants create an alphabet chart using the custom page feature.

2. **Topic on Front Cover**:  The user can choose a topic to be displayed on the right bottom corner of the front cover. Just click on **Click to choose topic** on the front cover page.

3. **Textbox to an image**:  One way to add a caption to a picture is to use the "Add a text box to image" feature.  Right-click on the picture and select Add Text Box to Image.  It will create text box that you add text to and that you move to a particular location within the picture.

4. **Create a new Style**:  The user can create a new style that is different from one of the default styles.  In the text box, click on the Gear icon. In the **Style Name** tab of the Format dialog box, click on **Create a new style**. Give the new style a new name and select the base style. Then you can make whatever changes you want to the new style.

5. **Text Box Properties**: There is a Change Layout control that allows you choose text box properties. These properties include languages, vertical alignment of word, borders and background.  Set the **change layout** icon for the text box. The click the Gear icon in the center of the text box.  The **Text Box Properties** dialog box appears.  Make whatever changes you would like.

6. **Unlock a Shell Book**:  The **locked** button at the bottom of the **Pages** pane tells you that book is in translated only mode.  Click the **locked** button.  Now the user can add, duplicate and remove pages.  The **Change Layout** control is now available for use.  The **Format** dialog box allows more format changes.

7. **Logo on Title Page**: To use this feature, you must choose an organization (e.g. SIL-International) in the **Bloom Enterprise Project** textbox in the **Settings** dialog box.  Then the logo for that organization will appear on the title page or on some other designated page.

8. **Template Starter**: In the left pane of the **Collections** tab, the Template Starter is one of the available templates. When you click it, the right pane displays how to use the Template Starter. Template Starter is a template you can use to provide a set of related page layouts that a user can choose while authoring an original book.
