Jesus Messiah: Gospel of Mark Picture Set

Adding illustrations from the *Jesus Messiah* graphic novel to the Gospel of Mark in your Scripture app is now incredibly easy!

What's more, a group of Malaysian artists created additional images in the same style to cover Mark's entire narrative, publishing it in a picture book called *Singa Yehuda*. All of these images are available, together with a placements file to insert each one at the right place in your Scripture app.

Just download the zip package here[1].

The package contains:

- All the picture files.
- An image placement file, to import into Scripture App Builder. (No need to edit the Paratext project!)
- A file containing the license wording to include in your app's About box.

Two of the pictures (Mark03_07-10.jpg and Mark07_29a.jpg) are maps, and will need to be customized for your language by adding labels before importing into SAB. Good programs for adding labels in a wide variety of scripts include Map Creator[2] and Inkscape[3].

The images are provided at the maximum resolution available, so you will probably want to use SAB's "resize the image files" feature to an appropriate width for your target audience. (Alternatively, you can resize a copy of the files to a maximum width using a tool like IrfanView[4]'s batch mode.)
