Things to do (a temporary page)

Tracker:

- ~~Make Trackerlist plugin to work -- it shows no items. (on Softwarelist page)~~ July 22- found the issue. I had my plugin set to show only Open items, and the ones I created were defined as Closed. I'm not sure why we would characterize items as open or closed, these are not To dos.
 - DH: New apps are marked closed by default because we are not using this feature.
- ~~Permit selection of multiple categories for Tasks.~~
 - DH: Is supposed to be possible, but I can't see how so far...
 - SW: This now works. Instead of a dropdown list it shows check boxes, and you can check more than one.
- ~~Fix permissions so anonymous users can see tracker items. Currently the software items are invisible if you are not logged in.~~
 - DH: Global vs Object permissions. Eventually resolved it by **deleting all object permissions** for the trackers and just leaving the global ones.
- Fix PDF button on page to actually work
 - DH: Waiting to hear back from CP. Server permissions issue.
